

Protect your assets with GPS-tracking

Protect tools and machines on the construction site with GPS-tracking. With this little and robust tracker it becomes very easy to secure and gain an overview of all assets. The employees will no longer waste valuable time on searching for equipment and can instead localize all assets directly on Google Maps.

- › Get full visibility of your machines, equipment, containers, trailers and other assets.
- › Specially designed for unpowered equipment and assets.
- › A motion sensor detects and unexpected movement of the assets.
- › The tracker is robust and compact. It is therefore derfor suitable for placement in exposed places. Withstands both dust and water.
- › 3 replaceable AAA-batteries secures up to 3 years of battery time. No maintenance required.

The AT2 has a compact size, which makes it easy to place on trailers, containers and other unpowered assets.

Tracking that can't be tracked by others

With the AT2 it is easy to track your equipment and tools, whenever there is a need for it. It is not possible for other parties to track the unit, as it is only pinging once a day. Meaning that burglars will not find it if they try to scan for hidden trackers.

If normal still standing equipment suddenly begins to move, the motion sensor of the AT2 will send you an alert. You can also setup working hours and mark areas via geofences that can trigger an alert if the equipment moves outside working hours and work areas. With one click you can open a digital map to track the asset and you will be able to pass on the exact location to the police in the case of illegal use or theft.

Easy to move

The tracker is easy to move between assets as the AT2 do not require a fixed installation. It is easily mounted with velcro, tape etc., which makes it possible to mount it at the most optimal placement.
